

FIELD SERVICE ENGINEER (M/E)

ALMELO, THE NETHERLANDS

THE POSITION

The Field Service Engineer Mechanical/Electrical is a member of the Service department and reports directly to the Manager Service. His/her job is to carry out corrective and preventative maintenance mainly in Europe, to commission and trouble-shoot HITEC products and third-party installations. Your main duties involve electrical engineering and work on both low and medium voltage installations. The main objectives are that you:

- Are responsible for independently preparing and carrying out service and maintenance work
- You are an ambassador for the service organization and offering after-sales care in accordance with the procedures, guidelines and (international) standards
- Provide technical support to customers, partners, distributors and agents
- Independently train operators for end customers
- Coordinate and act as a supervisor during the local installation stage prior to the commissioning of a product
- Inform the Help Desk for assistance if technical problems arise
- Are familiar with, and act in accordance to local conditions and culture

Requirements and Experiences:

- Qualifications in Mechanical Engineering and/or Electrical Engineering from Pre-vocational Secondary Education (MTS) with a great affinity for both mechanical and electrical engineering
- You can communicate in English
- Experience in working with diesel driven equipment or rotating equipment
- SCC safety certificate (VCA-VOL)
- NAN-3140 (VP)
- NAN-3840 (VP)
- Car drivers license (B+E)
- Relevant knowledge of standards and procedures.
- Skills to detect and resolve electrical disturbances.
- Great affinity for electrical engineering, the basic principles of electronics, low and medium voltage.
- Experience with working with PLC and processor/guided components and diagnostic software.
- Experience with measuring techniques and working with measuring equipment.
